## SKILLS

### DESIGN

Problem Definition · Vision-Setting · Interaction Design · Information Architecture · Rapid Prototyping · Wireframing · UI Design · Workshops · User Flows

### RESEARCH

Competitive Analysis · User Surveys · Interviews · Usability Testing · Card Sorts · Accessibility Testing

### AI & TECHNICAL

AI Prototyping · Prompt Engineering · Agentic UX Design · GitHub · Claude / LLM Workflows · AI-Assisted Design Systems

## TOOLS

## EDUCATION

### UX CERTIFICATE PROGRAM

Bentley University · 2017–2019

### PSYCHOLOGY, B.S.

Florida State University · 2008–2012

## WORK EXPERIENCE

### SENIOR PRODUCT DESIGNER II

2019–Present

HubSpot · Remote

Own the CRM Index page — HubSpot's highest-traffic surface, used daily by hundreds of thousands of salespeople and operators. Lead end-to-end design across records, views, and six visualization types (table, board, calendar, map, gantt, report). Promoted twice. Two-time recipient of cross-team scope expansion based on delivered platform impact.

#### NOTABLE ACHIEVEMENTS

- **CRM Page Editor** — Led vision, research, and design for a unified record customization builder that replaced 30+ scattered settings with a single tool. 700% increase in admin customization usage post-launch. The composable card framework I architected was adopted by Help Desk, Sales Workspaces, and the Index page team
- **Views v2** — Redesigned the save and permissions model for HubSpot's highest-traffic page. Introduced a base layer / working layer architecture and three-tier role system (Owner, Collaborator, Member) to solve years of unpredictable save behavior that drove mass view duplication across customer portals.
- **App Settings Framework** — Created the vision, research, IA, and design for a standardized settings framework now underlying 1,500+ Marketplace apps. Achieved NPS of 87 (target: 25). Designed the UI Builder that opened the framework to all external App Partners.
- **CRM + Accounting Integration** — Designed HubSpot's first accounting integration (QuickBooks Online) as a reusable framework. 10,000+ installs across all accounting tools built on the API. \$17M in invoice revenue tracked through the platform. Featured at INBOUND.

### UX DESIGNER

2017–2019

Aquent · Boston, MA

Sole designer on BOOK, an ML-powered talent recruitment platform that made creative portfolios searchable by visual style — designed from the ground up across research, IA, interaction design, and visual design.

#### NOTABLE ACHIEVEMENTS

- **Research Strategy** — Led 21 user interviews and a 147-respondent survey that reframed the product from image search to creative talent discovery. Collaborated with engineering on the ML classification model powering the search experience.
- **Revenue Impact** — Within 3 months of launch: \$7.4M in placement revenue, 98.7% talent retention, +8% fill rate improvement, –12% average time to fill.
